Cerberus™ v12.7 Software Enhancements

Orpheus™

- Speed, flow rate, wellhead pressure and axial force on end can now be varied over multiple depth intervals; the inputs are entered into a new streamlined parameter profile interface which makes it easier to set up complex models.
- Friction coefficient analysis has several new improvements including; additional options for calibrating the stripper friction and reel back tension and an option to plot the field weight data and modeled curves with a normalized wellhead pressure.
- The project notes section on the configuration screen is now automatically-populated in the remarks section of the reports; also, the maximum character count for this screen has been increased to 600 characters.
- For CT projects only:
 - The catastrophic buckling limit has been added to the limits plot in force monitor.
 - A new option is available in the reports section which is called “CT Operator Reference”; this component includes two columns for downhole data (Max Set-Down and Max Pick-Up at Yield).

String Editor

- A feature to “apply to all” has been added to the bias weld derating input when using Achilles 4.0 or lower.

Hydra

- When advancing fluids into the well, a feature has been added which will track the cumulative volume of each fluid that has been pumped into the well.

Reel-Trak

- An audio/visual alarm is now available to alert customers when a predetermined amount of fatigue has accumulated on a job.
 - Equipment manager is now integrated into Reel-Trak.
-

General Enhancements

- Two new fields have been added to every component of the select tree diagram including one for “Date Modified” and one for “Modified By”.
- Russian is now available as a language option in Cerberus.

Cerberus v12.7 is 64-bit compatible and supports the Windows 7®
Windows 8®, and Windows 10® operating systems using .NET Framework 4.0

Attention: Cerberus Users with Current Licenses

Licensed Cerberus users may download the current-version Cerberus software from the NOV CTES website.

➤ **To download Cerberus v12.7**

1. Obtain password information (see below)
2. (Recommended) Back up all Cerberus-related data
Select **Utilities > Backup & Restore > Backup Data Directory**
3. (Recommended) Uninstall earlier-version software
4. Navigate to the NOV CTES software download center:
<https://ctes.nov.com/CustomerPortal/ProductDownloads.aspx>
5. Input your **Username** and **Password** to access the appropriate file.

➤ **To obtain password information or to renew a license**

- Contact NOV CTES for assistance:
+1 936 777 6200
CTESkeys@nov.com

➤ **To obtain authorization (when prompted)**

- Click the online **Internet** button
OR
- Email the authorization code to CTESkeys@nov.com
