

New **annulus frac** technology paves the way for **maximizing the bore** through completion and **reducing intervention.**

Sliding sleeve is compact

Other sleeves can be 10-12 ft long, while the **Bulldog** is only 18 in and easy to install by hand. With the shorter Bulldog sleeve, there is no need to cut casing joints to get the correct spacing between sleeves in the well.

Shift up to open

Our sleeves use a flow-activated shifting tool to find an internal profile. Once the profile is engaged, open the sleeve by pulling. The shift up allows us to have a short sleeve and is faster and more efficient operationally.

Bulldog™ Frac System
