The NHA Hydraulic Tubing Anchor is a hydraulic set, retrievable anchor catcher designed to hold the tubing string in compression or tension. The NHA does not require tubing manipulation to set or retrieve. To set, pressure is applied to a temporary plug below the anchor. After setting, bi-directional slips anchor the tubing to prevent tubing movement during rod pumping and to prevent the tubing from falling should the tubing part.

The compact design is ideally suited for doglegs and highly deviated wells. The anchor is available in both wicker and carbide slip configuration. The NHA is released by straight-pull to shear releasing pins.

Features
- Hydraulic set
- Adjustable straight pull shear release
- Short overall length is suitable for highly deviated wells
- Premium threads available upon request

Benefits
- No tubing manipulation required to set or release
- Can be landed in tension or compression
- Increases pump efficiency

Applications
- Rod Pump installations
- Deviated wells
