

## Drill Pipe Darts & Setting Ball

---

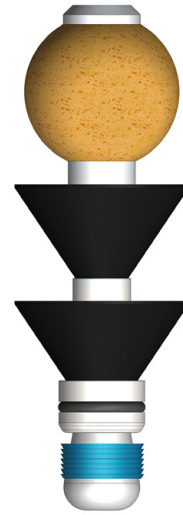

Drill pipe darts (DPD) separate the cement column in the drillstring and activate and release the wiper plugs. For the duo wiper plug system, one drillpipe dart is pumped respectively before and behind the cement column. The drillpipe dart behind the cement column is used only with the single wiper plug. The sponge ball drillpipe dart provides outstanding sealing properties in the drillpipe combined with optimal cleaning.

### Features/Benefits

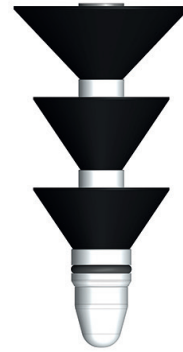

- Available for all drillpipe sizes
- One-size string or combined string
- Available with lock feature

### Materials

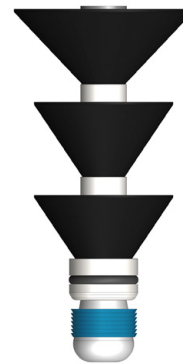

- Aluminium/rubber

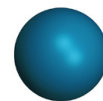

DPD – with Sponge Ball

DPD – for Duo Wiper Plug

DPD – for Single Wiper Plug
