

MRS-setting Tool - Rental Equipment

The MRS-setting tool supports the installation of rotating liner hanger systems. The mechanical safety device allows the liner to rotate in tension and enables circulation at the same time. When a preset load has been reached, the mechanical lock will be released through shearing of shear pins. The MRS-setting tool is released from the liner hanger system by clockwise rotation. During the cementation, the complete liner can be rotated to enhance the quality of cementation.

Features/Benefits

- Used to run right-hand mechanical and hydraulic set liner hangers
- Dependable roller bearing/floating nut system ensures positive release from the liner top
- High load capacity to carry long and heavy liners to target depth
- Liner can be rotated to improve the quality of the cement job
