

170AUH Hydraulic Actuator

Our 170AUH Hydraulic Actuator is designed according to specific customer requirements. The simplicity, ease of maintenance and adaptability are key features of this product.

The actuator's stem stack is contained in packing retainer assembly which can easily be removed from the bonnet. Also available are limit switches, valve position indicators, fusible and standard lockout caps, stem protectors, mechanical and hydraulic opening assemblies.

Applications

- Christmas tree gate valves
- Pipeline protection

Features

- Hydrogenated Nitrile Butadiene Rubber (HNBR) packing
- Visual open-close indicator upper stem extension specifies gate position at a glance
- Accessibility to the lower stem seals without removing the bonnet
- Fewer parts
- Standardized lower stem sizes
- Hydraulic actuator is removed from the bonnet assembly by removing 8 radial bolts

Benefits

- Improved field performance since fewer parts are used compared to most other hydraulic actuators.
- Closes upon loss of pressure control (fail-safe)
- Simplifies spare parts requirements
- Can be designed to replace any of the existing actuators
- Easy maintenance
