Max Completions
Mobile Application

Real-Time Completions Data at Your Fingertips

Previously CTES Live™, the Max™ Completions mobile application simplifies and streamlines your completions data handling needs on your mobile device.

You and your customers can now view and add photos, videos, and comments to all available jobs on location or in your office—from the palm of your hand.

Your data is transferred to the cloud via an internet connection on location, and all data is securely stored on NOV cloud servers. By having a connective and interactive location, all data from the job log is combined onto a single platform.

You can now utilize aggregated data sources to empower real-time data-driven decisions across completions projects that improve your operational efficiencies and financial performance.

Features

- View all running jobs for your company or jobs shared to you

- Share access to the running job via the app on location

- View and create comments from the mobile app, such as redefined comments associated with KPI metrics and free text comments

- Add pictures and videos from the job site that will be saved in the Max Completions job log and reports
