

iMaxx Wireline Logging Truck

The industry's most expansive field of view for pump-down operations on multi-well pad sites.

A traditional logging truck has limited vision between the van's rear side walls. From the point of view of the operator, this can be as little as 18 degrees. A modified logging truck with no side walls (typically referred to as a "half back") provides increased vision of up to 74 degrees, but still doesn't provide the maximum visibility needed by operators on multi-well pad locations. In response to these challenges, we designed the iMaxx™ truck, providing operators with the industry's most expansive range of vision: 176 degrees.

Features/Benefits

With 24/7 operating conditions, special efforts have been made toward operator comfort with the addition of a high-quality powered captain's chair.

- Powered lumbar support
- Six-way powered adjustable base
- Heated seat and heated reclining backrest
- Self-leveling arm rests
- Perforated inserts
- Massage system

In conjunction with the upgrades built into our iMaxx pump-down logging truck, all familiar features required for traditional wireline and logging activities are still available (customer's choice of chassis, variable logging speeds, etc.)

Specifications

Laminated Saflex® SG Solar Interlayer glass:

- Absorbs 96% of UV rays and effectively blocks solar heat transfer
- Has a PVB acoustic quality that helps to reduce exterior noise

Wide range of LED lighting available:

- Light bars and high-power LED rig lights
- Specialty power swivel spot lights
- Remote-controlled light towers (up to 120,000 lumens)
