

Epsilon Pump

A range of highly engineered progressing cavity pumps offering lifetime cost savings compared to conventional drive train designs.

Typical Applications

- Primary and secondary sludge
- Mineral processing
- Industrial chemicals, detergents, polyethylene glycol
- Crude oil, hydraulic oil, waste oil
- Starches, liquefied potato peel, cocoa butter
- Natural and synthetic latex
- Mine dewatering
- Milk curds, sauces, fruit juices
- Paper stocks
- Gypsum and silicate
- Kaolin slurry, coating slurry

Capacity

- Up to 420 m³/h

Pressure

- Up to 24 bar

Temperature

- 10°C up to 110°C

Features and Benefits

Flexishaft™ Transmission

Wearing components are eliminated between the drive end and the pumping element, offering you increased reliability. No lubrication is needed, therefore product contamination is eliminated. A shorter Flexishaft™ is available where space is a priority. Backed by a 10-year warranty.

Bloc Construction

Minimizes overall dimensions, giving you a shorter pump length. Eliminates the need for coupling and guard.

Interchangeable Components

A large number of Epsilon components are interchangeable with the Compact C Pump, reducing inventory holding.

Materials of Construction

Available in cast iron or stainless steel, with a choice of rotor and stator materials to suit individual applications e.g. hard chrome plated rotor or natural rubber stator.

Inspection Cover

Available for applications where rag content is a problem.

Bloc Low Running Speeds

Reduced wear for a longer working pump life which extends the periods between routine maintenance. Think of the savings that could be realized on abrasive applications.

Gentle Pumping Action

Minimizes shear and crush damage to the pumped product, while maintaining a steady flow when pumping products with a high solids content.

Duracoat Coating

Rotors can be supplied with a range of specialized coatings to help extend the life of the rotors through improved wear and corrosion resistance.

High Pressure/Long Haul Pumping

Can offer considerable project cost savings by utilizing small borehole pipework and eliminating the need for a series of pumps when pumping over long distances or with high head requirements

Robust Drives

Specially selected fixed and variable speed drives for longer life.

Epsilon Pump

Performance

*E1BB models and above, and various 4 stage options are bareshaft and not available on a form folded baseplate.

For guidance in selecting a pump or for 4 stage and larger Epsilon models, please contact NOV.
