

Maestro Ross Hill Automation

Automation upgrades, even quicker

Fully automate your Ross Hill engine controls with the Maestro Ross Hill Engine Automation Package. This automation package upgrades existing NOV Ross Hill Controls for complete automation and integration with our Amphion™ and Maestro™ systems, allowing you to manage, control, and monitor drilling applications and power efficiency of your land rig in real time.

The minimally invasive Maestro Ross Hill upgrade eliminates the need for a complete replacement of engine control electronics. Installation can be completed in as few as three to four days and can be completed simultaneously with a rig move. The automation upgrade uses approximately 90% of original Ross Hill components, which when coupled with faster installation times, reduces upgrade costs by 40%.

Features and Benefits

- Easily integrates with NOV Amphion and Maestro systems
- Faster installation
- Less down time
- Maintains core Ross Hill components
- Eliminates manual knob adjustments
- Automated stop/start
- Capable of hi line/utility power load sharing
- Capable of third-party energy storage integration
