

The *Agitator*™ system from NOV is the original friction reduction tool. The system has been run more than **50,000** times in drilling applications, plus additional runs in coiled tubing applications, and is used daily around the globe.

You can count on the *Agitator*™ system for the best reliability and performance, enabling you to save rig time and reduce drilling costs. Since 2012, the power section stator elastomer in the *Agitator* system has demonstrated **99.9%** reliability, globally.

With our standardized sales, service quality, and engineering support systems, you'll receive the very best equipment, on time, with full traceability, and supported with local technical expertise in our 45 global service facilities.

Regardless of what they say,
**No One Else Has
an *Agitator*™ System**

For more information on the benefits of axial oscillation tools over lateral vibration tools, refer to the SPE paper SPE-173024-MS, "Axial Oscillation Tools vs. Lateral Vibration Tools for Friction Reduction - What's the Best Way to Shake the Pipe?"
