5 in. Wired Jet Sub with wXT39 Connections and Integrated Float

Jetting subs are typically used to dislodge debris and clean out BOP's risers and wellhead areas. The device has 2 ports which can be fitted with a variety of nozzles allowing the tool to adapt to different pump capacities and applications.

These jetting subs are also used to solve the technical challenge of homogenous nitrogen distribution throughout the mud system in high-aspect-ration ERD wells. In this application, multiple jetting subs are typically run in tandem along the string.

Jet Sub Specifications	
Part number	508373
Size	5.25 in.
OD	5.28 in.
ID	1.8 in.
Number of nozzles	2
Connection	wXT39
Float valve	2F-3R
Maximum temperature	300°F

Features

- Simple and compact design
- Ports remains open
- · Integral body design
- Nozzle sizes adjustable
- Integrated float sub design (float valve not included)
