

# Tolteq iSeries MWD System

The Tolteq™ MWD kit box is a total solution.

## iSeries pulser gamma module

- Operational time and environmental history logged in internal memory\*
- Integrated three-axis digital flow switch
- Shock and vibration monitoring and logging, flow switch values, and performance logging\*
- More than 350 operational hours on a single battery

\*Requires Tool Tracker™ software to download

## iSeries directional module

- Operational time and environmental data recorded in internal memory
- On-board rotational detection, shock, vibration, and RPM pulsed to surface in real time
- User-programmable survey, sliding, and rotating sequences available
- Automatic switching between sequences

## GUIDE surface system

- Automated intelligent matrix filtering with automated pulse decoding optimization
- Wireless link from rig floor to shack (cable link available)
- User-friendly/plug-and-play interface
- Water-tight, durable Pelican case
- Rugged marine connectors on rig floor display

## SureCircuit test box

- Traditional make-break functionality
- Check battery voltage and depassivate with the push of a button
- Eliminate accidental battery drainage through automated depassivation
- Isolate any part of your toolstring with uphole and downhole connectors
- Quickly identify inactive signals with LEDs dedicated for each line

## Job box

- Inclusive—all the equipment needed to man a job
