

# KC Connection for API Buttress (BTC) connections

Tuboscope's KC Connection for API Buttress (BTC) connections is a high-performance modification for internally coated pipe that provides superior protection from connection issues due to corrosion and erosion in deeper disposal wells.

**Protecting tubular connections with KC Connection improves tubular performance, extends asset life and reduces the risk of failures and downtime.**

---

**Primary Applications:** Deep saltwater disposal and injection wells

---

#### **Available in 4.5", 5.5" & 7" sizes up to Grade P110**

- Facilitates highly deviated wells to avoid jump-out
- Chrome ring provides support to seal during rapid decompression
- Compliments Tuboscope™ TK™ products to provide a coatable BTC connection
- Improves laminar flow through connection area to protect against erosion
- Increase connection life
- Multiple connection make-up and break-out
- 24hr technical support services
