

NOV Stacking Programs

Keep your fleet **ready to drill**

Our global team of experts work with you to help with the preservation and reactivation of your rigs between contracts to ensure that they are running optimally and contract-ready as soon as you need them.

NOV Stacking Programs

We have designed a customized Stacking Program for both warm and cold stacked rigs to ensure the integrity of your OEM equipment between contract periods and seamless transitions from stacked to ready to operations.

Our experienced team will carry out the entire process, from assessment, preservation, routine operation and maintenance, to reactivation and acceptance.

We offer two types of Stacking Programs:

Complete program

- Project management teams assigned by NOV
- NOV-executed program
- Turnkey project
- Minimal support personnel from customer
- Equipment experts involved throughout project

Supervisory program

- Project management team assigned by NOV
- NOV personnel provide onsite supervision
- Customer-executed programs

Why our Stacking Programs?

- With reduced reactivation time and cost through proactive project management, we ensure the optimal solution for your fleet needs during stacking periods.
- Our global network of trained and competent OEM experts ensure your rigs are up and running optimally when and where they are needed.
- Our high level of quality assurance meets the industry requirements for safe and efficient drilling.

Warm or cold?

Cold

- High preservation costs
- Minimal operational / maintenance costs
- High reactivation costs and duration

Warm

- Low preservation costs
- Operational / maintenance costs
- Low reactivation costs
- Ensures equipment integrity

Did you already cold stack your rigs?
We offer a complete service that includes all the necessary stages to reactivate your rigs for contract.
