Voyager BD Single Open Frac Sleeve

The Voyager™ BD Single Open (SO) is a ball-drop activated frac sleeve for open-hole completions. The Voyager BD SO was specifically designed to remove any components that limit the performance of the end user’s well. For each casing weight, the sleeves, packers, and other equipment have been designed to exceed the casing specifications outlined in API 5CT.

For each ball pumped from surface, a corresponding sleeve downhole is opened, allowing communication between the casing ID and the formation of interest. The stimulation operation is continuous with balls of increasing OD being pumped from surface as the operation works towards the heel of the wellbore.

Applications

- Acid or proppant stimulations
- Completions requiring reliable, single point of entry
- High stage count designs

Features

- Sleeves are designed to API SCT ratings for casing
- Ball-drop activated
- Drillable cast iron ball seats for optimal drill out

Benefits

- Efficient ball-drop completion that allows well production immediately after stimulation
- Can be milled out in the open or closed positions
- When combined with dissolvable balls, the sleeves can begin production with no further intervention required
- New ball technologies allow for high stage count applications
- No handling pup joints required
