

# Pompano Beach Plaza

Red Thread IIA pipe was installed at the Pompano Beach Plaza in the 1970's and continued to perform into 2011. When it became necessary to redo and enlarge the rest stop again, the contractor chose the product that had worked for over 30 years.

This plaza is one of eight in the 460 miles of turnpike with a traffic load of 1.8 million cars a day on average. Turnpike stations typically handle 38-40,000,000 gallons of fuel per year on average. The reliability and site-proven performance of Red Thread IIA pipe and fittings helped make this the product of choice.

## Project

Florida Turnpike

## Application

Gasoline octane 87, 93, E-85 AND DIESEL, 208 fueling points under canopy.

## Product

Over 30,000' of 2", 3", 4" and 6" Red Thread IIA pipe, fittings and sump entry fittings.

## Installation date

2011

## Features & Benefits

Lightweight, easy to install, corrosion resistant and carrying a 30-year warranty
