

# BOSS Lift

## Helping you deliver protected pipe. All day, every day.

BOSS Lift™ is the official lifting bail supplied by Tuboscope's MSI Pipe Protection Technologies for handling loads from drill pipe, stabilizers, subs, collars, and bits. Designed and proof tested to 3x the safe working load (SWL), BOSS Lift is manufactured using ASTM A27 Grade 60-30 material and machined to meet current API thread connection standards. Both the thread connections and shoulders are precision machined and feature phosphate coating for added corrosion protection.

As a standard, material test certificates are provided with orders at no additional charge to our customers. MSI also maintains complete traceability by providing unique serial numbers molded into each lifting bail.

Due to the harsh work environment that BOSS Lift is exposed to, MSI strongly recommends that end users carry out an additional and thorough inspection of the product before each use.
